

Competitiveness. A prerequisite for wellbeing and convergence in Europe?

Jorge Uxó, University of Castilla – La Mancha

1st TUREC
Vienna
September 22-23, 2016

OVERVIEW:

1. **Interpretation and utilization of the concept of competitiveness by the European authorities (“Five Presidents Report”).**
2. **Wage restraint policies and the wage-led character of the European economies.**
3. **Recessive effects of internal devaluation and austerity policies: the case of Spain.**
4. **Does all this mean that external imbalances are not relevant? Balance-of-Payment-Constrained Growth Rate and current account imbalances within the Eurozone.**

1. Interpretation and utilization of the concept of competitiveness by the European authorities (“Five Presidents Report”)

1.1. “Competitiveness”, at the centre of economic policy strategy → What relation with other more genuine objectives of economic policy (full employment, equality)?

- Full-employment as a side effect of macroeconomic stability and market flexibility (“delayed gratification”).
- “Competitiveness channel” as a mechanism to absorb asymmetric shocks in a monetary union. Limited role of macroeconomic policies.
- The specific measures actually displayed to improve competitiveness (labour market reforms, wage restraint, cutbacks in the Welfare State) deteriorate social standards.

1.2. “Competitiveness” and the promotion of export-led (mercantilist) growth model:

1.2. “Competitiveness” and the promotion of export-led (mercantilist) growth model:

- Domestic demand is –and it should be– the main source of aggregate demand for European countries.

AK Chamber of Labour (2016)

1.2. “Competitiveness” and the promotion of export-led (mercantilist) growth model:

- Domestic demand is –and it should be– the main source of aggregate demand for European countries.
- The Eurozone actually suffers a demand shortfall (low GDP growth, low inflation, external surplus, high unemployment).

AK Chamber of Labour (2016)

	2015	2016	2017
GDP growth	1.7	1.6	1.8
Inflation	0.0	0.2	1.4
Unemployment	10.9	10.3	9.9
Current account	3.6	3.7	3.6
Budget Balance	-2.1	-1.9	-1.6

1.2. “Competitiveness” and the promotion of export-led (mercantilist) growth model:

- Domestic demand is –and it should be– the main source of aggregate demand for European countries.

- The Eurozone actually suffers a demand shortfall (low GDP growth, low inflation, external surplus, high unemployment).

	2015	2016	2017
GDP growth	1.7	1.6	1.8
Inflation	0.0	0.2	1.4
Unemployment	10.9	10.3	9.9
Current account	3.6	3.7	3.6
Budget Balance	-2.1	-1.9	-1.6

- Policies recommended to increase external demand (wages) aggravate this lack of demand.

1.3. Is export-led a solution to unemployment due to lack of demand or is only “exporting” the problem? (Beggar-thy-neighbour policies)

“If nations can learn to provide themselves with full employment by their domestic policy (...) there need be no important economic forces calculated to set the interest of one country against that of its neighbours. (...) There would no longer be a pressing motive why one country need force its wares on another or repulse the offerings of its neighbor (...) with the express object of upsetting the equilibrium of payments so as to develop a balance of trade in its own favour. International trade would cease to be what it is, namely, ***a desperate expedient to maintain employment at home by forcing sales on foreign markets and restricting purchases, which, if successful, will merely shift the problem of unemployment to the neighbour which is worsted in the struggle.***”

J.M. Keynes, GT

1.4. Are trade imbalances within the Eurozone mainly due to price-competitiveness / ULC divergence? What role for structural competitiveness and demand divergence?

Table 3. Explanations of current account imbalances and policy recommendations

	Inflationary adjustment in centre countries: higher wages and fiscal expansion	Euro-exit for deficit countries or a dissolution of the Euro	Internal devaluation and fiscal austerity in deficit countries
Costs as prime determinant of current account imbalances; little role for demand	Priewe (2012), Mazier and Petit (2013)	Flassbeck and Lapavitsas (2013) Lapavitsas (2015a,b) Johnston et al (2014)	European Commission (2011) Sinn and Valentinyi (2013)
Costs and demand as important determinants of current account imbalances	Stockhammer and Sotiropoulos (2014), Stockhammer (2016b)		
current account imbalances driven by demand developments, not costs	Storm and Naastepad (2015a)		Diaz Sanchez & Varoudakis (2013) Gabrisch & Staehr (2014) Wyplosz (2013)

Constantine, Reissel and Stockhammer (2016)

1.4. Are trade imbalances within the Eurozone mainly due to price-competitiveness / ULC divergence? What role for structural competitiveness and demand divergence?

1.4. Are trade imbalances within the Eurozone mainly due to price-competitiveness / ULC divergence? What role for structural competitiveness and demand divergence?

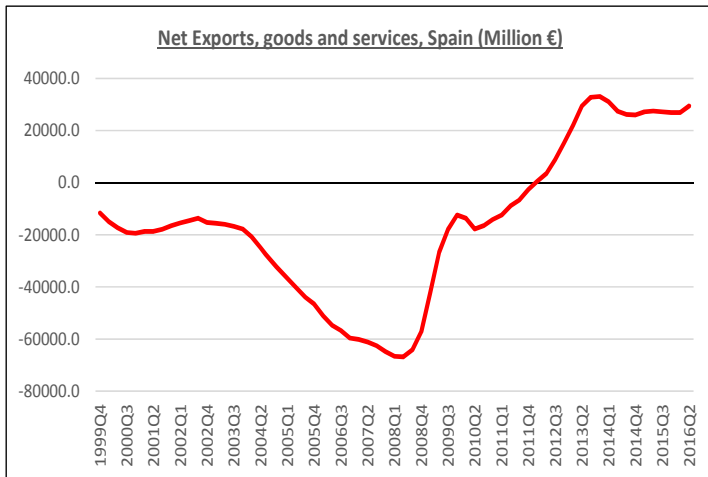

1.4. Are trade imbalances within the Eurozone mainly due to price-competitiveness / ULC divergence? What role for structural competitiveness and demand divergence?

- Divergent domestic **demand** growth (debt-led vs export-led models) → Divergent **import** growth → **CA imbalances**
 ↓ ↑
 Increase in ULC in non-tradable sectors → inflation differentials

1.4. Are trade imbalances within the Eurozone mainly due to price-competitiveness / ULC divergence? What role for structural competitiveness and demand divergence?

- Divergent domestic **demand** growth (debt-led vs export-led models) → Divergent import growth → **CA imbalances**
 ↓ ↑
 Increase in ULC in non-tradable sectors → inflation differentials
- Complexity of products, technological differences and other structural competitiveness differences.

1.5. Competitiveness Authorities → what reference for ULC?

- No “optimal wage regime” is explicitly defined, considering macroeconomic objectives. Implicitly → country where ULC growth is lower.
 - ❖ Chagny and Husson (2015): two objectives (homogeneous wage growth within each country, in line with average labour productivity + upward convergence of real wages among countries) and one constraint (cannot lead to systematic distortion of cost competitiveness).
 - ❖ Hein and Detzer (2015): nominal wages should rise according to the sum of long-run average growth of labour productivity in the national economy plus the target rate of inflation for the Euro area as a whole → ULC growth = 2%.

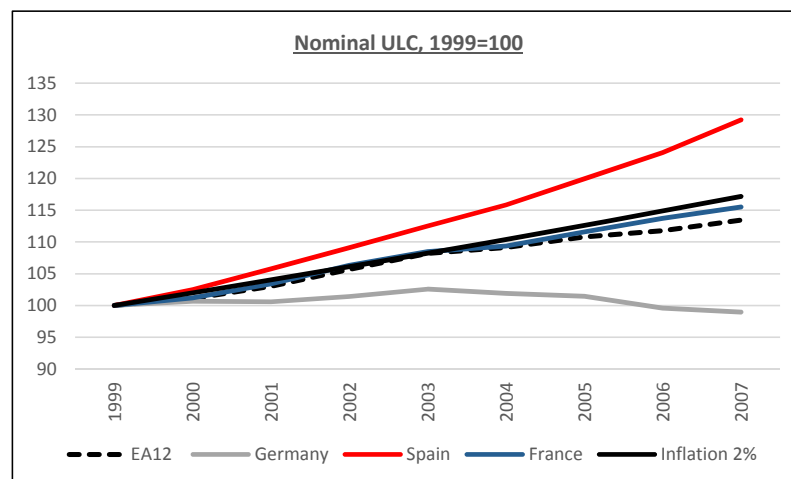

1.5. Competitiveness Authorities → what reference for ULC?

- No “optimal wage regime” is explicitly defined, considering macroeconomic objectives. Implicitly → country where ULC growth is lower.
- ❖ Chagny and Husson (2015): two objectives (homogeneous wage growth within each country, in line with average labour productivity + upward convergence of real wages among countries) and one constraint (cannot lead to systematic distortion of cost competitiveness).
- ❖ Hein and Detzer (2015): nominal wages should rise according to the sum of long-run average growth of labour productivity in the national economy plus the target rate of inflation for the Euro area as a whole → ULC growth = 2%.

3. Recessive effects of internal devaluation and austerity policies: the case of Spain.

✓ Recent economic growth in Spain is sometimes presented as an evidence of a successful economic policy strategy which main elements are:

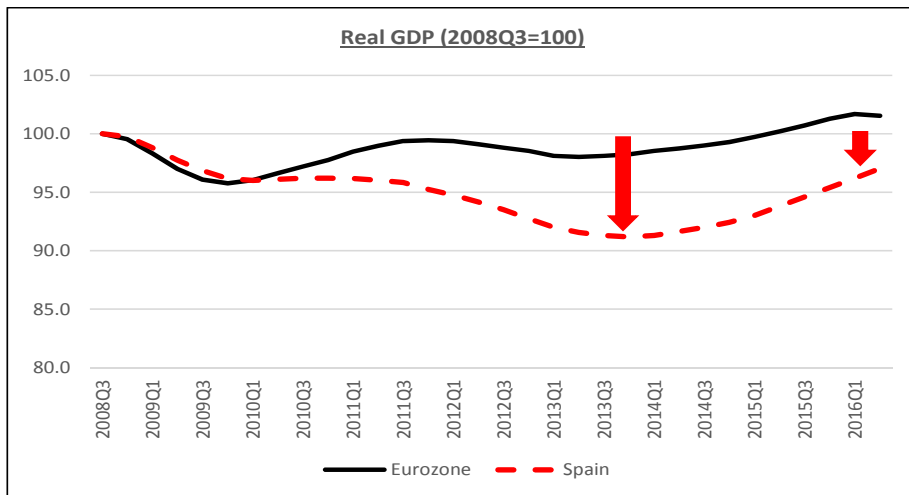

- ❖ Internal devaluation, to improve competitiveness.
- ❖ Fiscal austerity, to assure macroeconomic stability.
- ❖ Structural reforms, to increase potential output.

✓ Recent economic growth in Spain is sometimes presented as an evidence of a successful economic policy strategy which main elements are:

- ❖ Fiscal austerity, to assure macroeconomic stability.
- ❖ Structural reforms, to increase potential output.

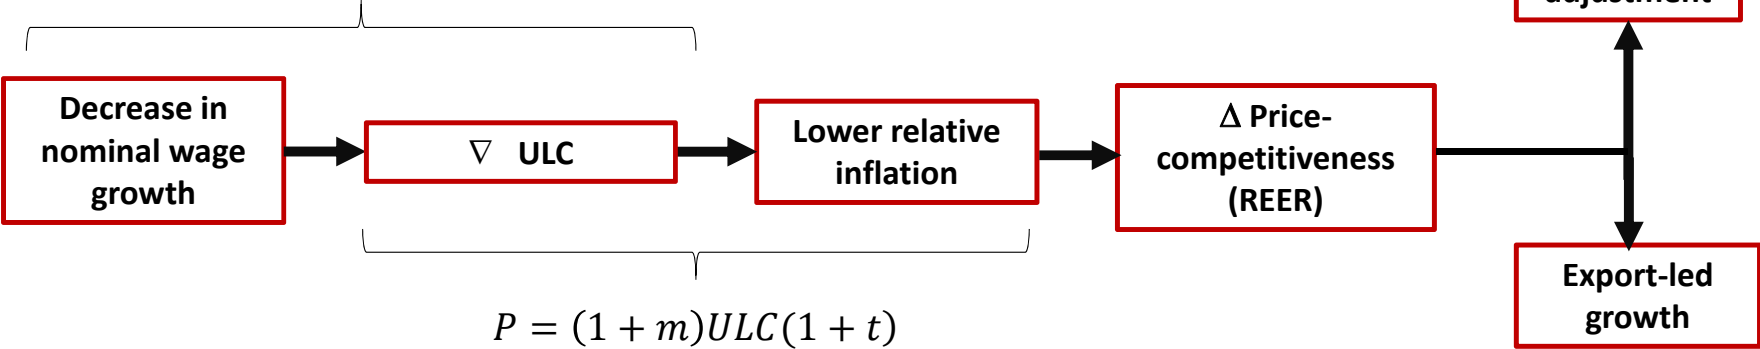

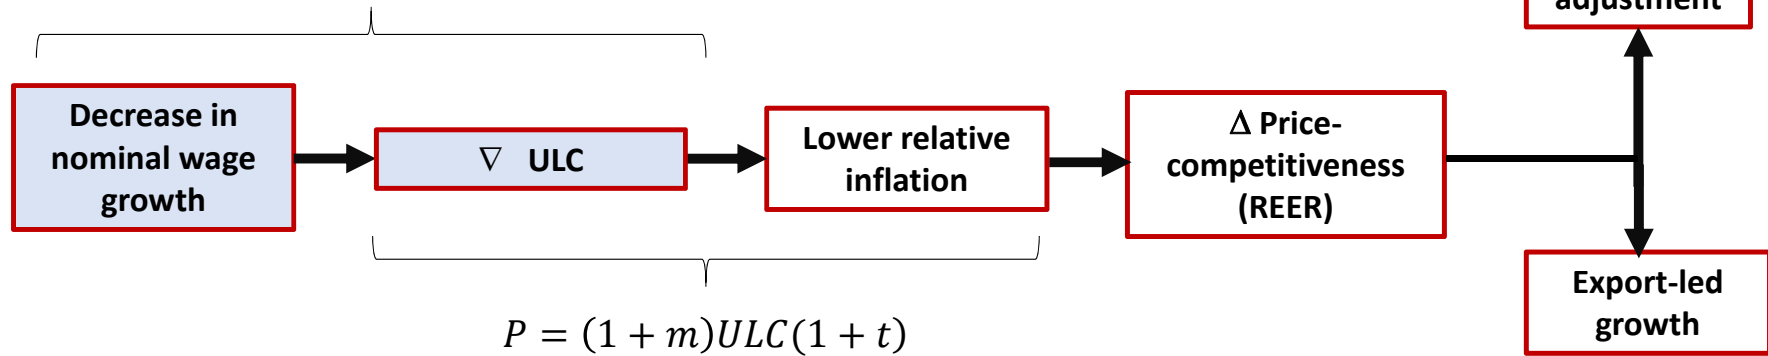

- ✓ Recent economic growth in Spain is sometimes presented as an evidence of a successful economic policy strategy which main elements are:
 - ❖ Internal devaluation, to improve competitiveness.
 - ❖ Fiscal austerity, to assure macroeconomic stability.
 - ❖ Structural reforms, to increase potential output.

- ✓ Specifically, “internal devaluation” policies have been justified with two main arguments: to correct external imbalances; to trigger an export-led growth recovery, compensating weak domestic demand.

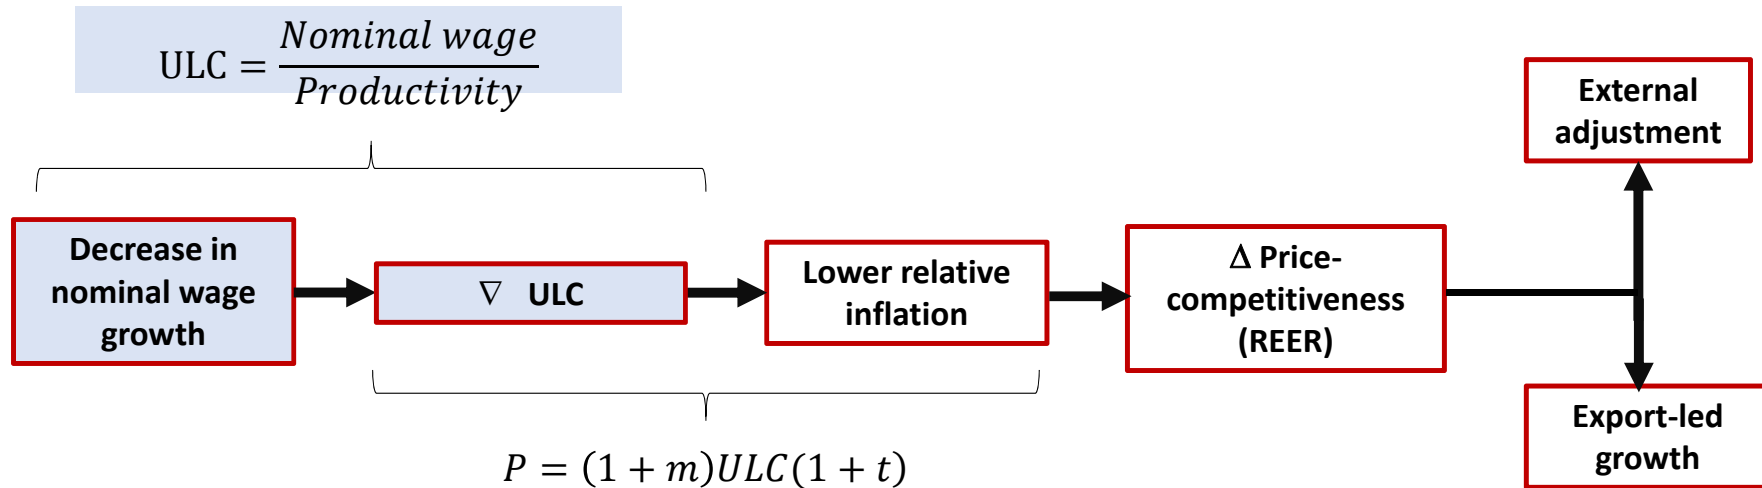

$$ULC = \frac{\text{Nominal wage}}{\text{Productivity}}$$

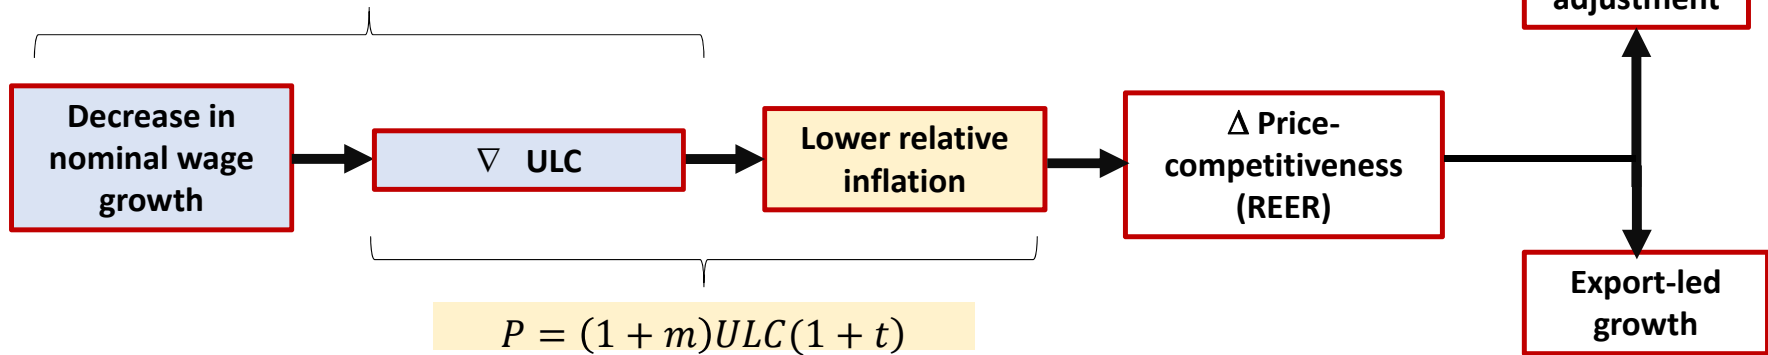

$$ULC = \frac{\text{Nominal wage}}{\text{Productivity}}$$

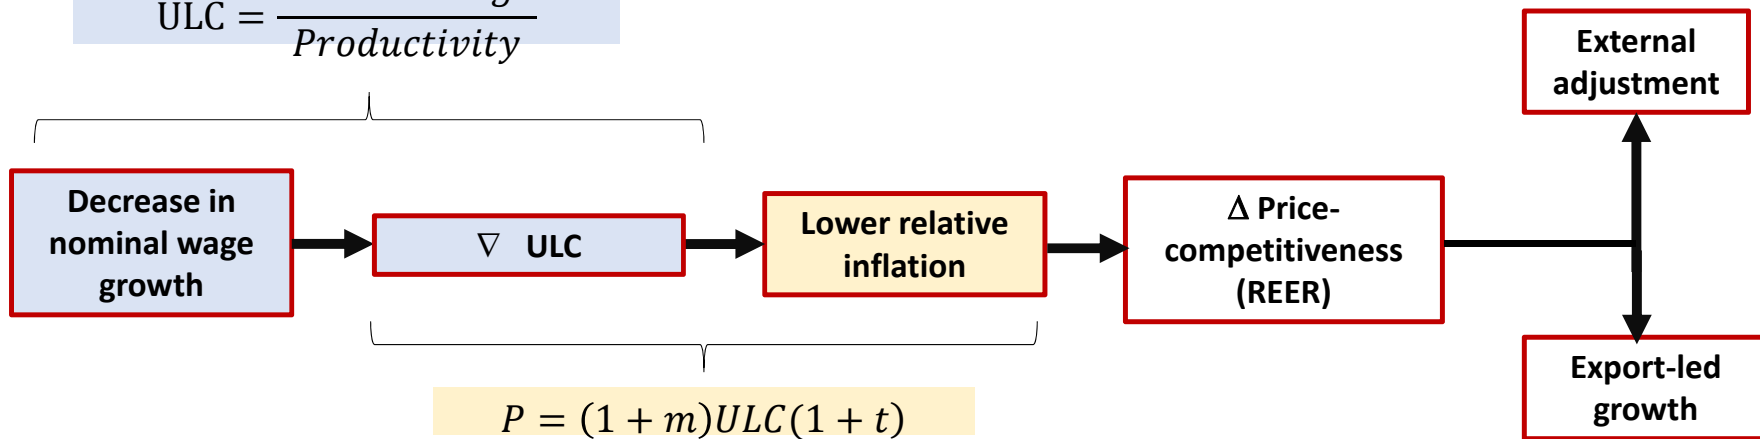

$$ULC = \frac{\text{Nominal wage}}{\text{Productivity}}$$

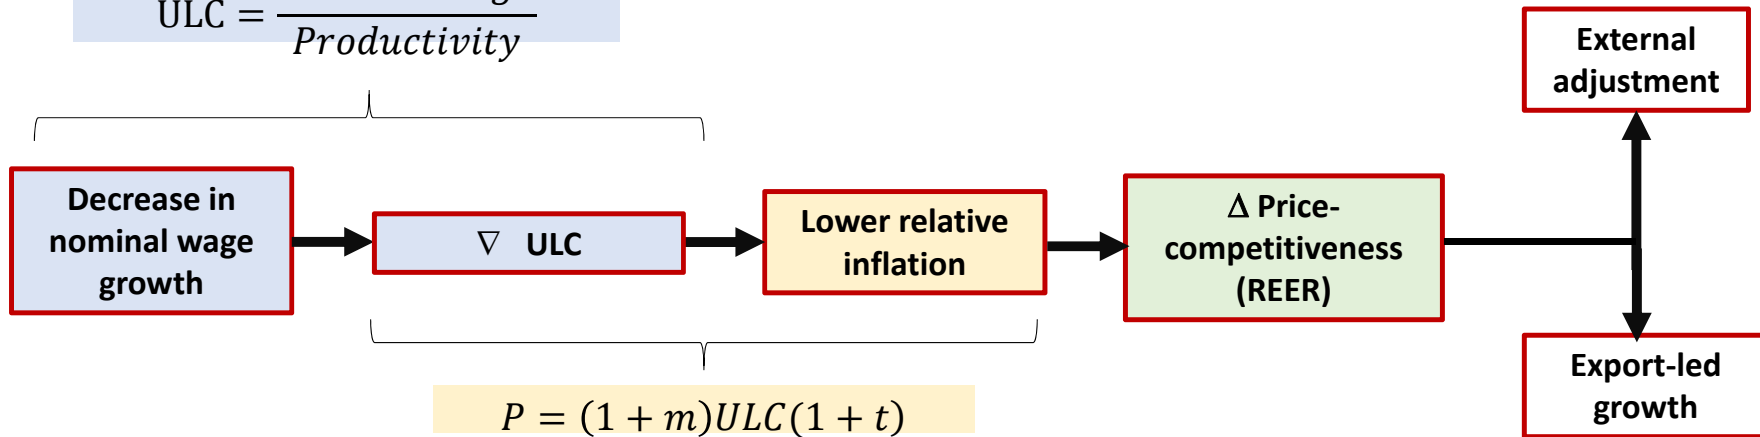

$$ULC = \frac{\text{Nominal wage}}{\text{Productivity}}$$

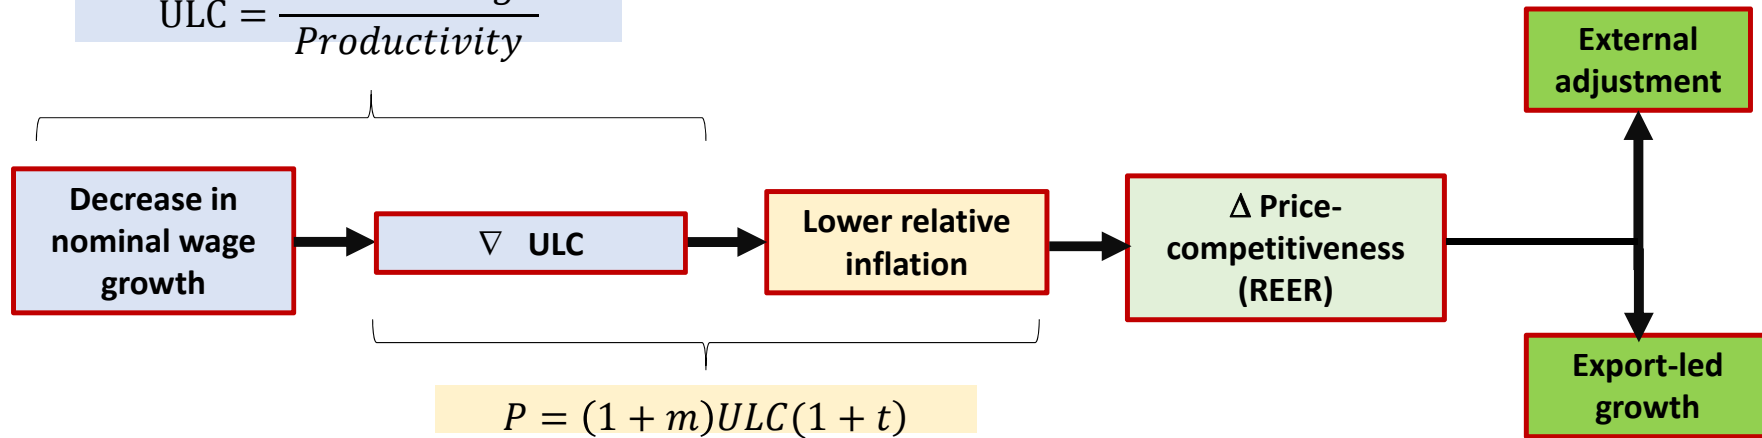

$$ULC = \frac{\text{Nominal wage}}{\text{Productivity}}$$

$$ULC = \frac{\text{Nominal wage}}{\text{Productivity}}$$

$$ULC = \frac{\text{Nominal wage}}{\text{Productivity}}$$

3 EXPORTACIONES DE BIENES Y SUS DETERMINANTES (COMPETITIVIDAD MEDIDA CON PRECIOS DE EXPORTACIÓN)

Spain		2001-2007	2010-2013	2014-2016
Contribution to GDP growth	Domestic Demand	4.4%	-2.8%	2.7%
	External Demand	-0.9%	1.5%	-0.2%
	* Exports	1.0%	1.4%	1.6%
	* Imports	-1.9%	0.1%	-1.9%
	Total GDP	3.6%	-1.4%	2.4%
Real growth rate	Exports	4.1%	4.4%	5.0%
	Imports	6.7%	-1.5%	6.0%

Spain		2001-2007	2010-2013	2014-2016
Contribution to GDP growth	Domestic Demand	4.4%	-2.8%	2.7%
	External Demand	-0.9%	1.5%	-0.2%
	* Exports	1.0%	1.4%	1.6%
	* Imports	-1.9%	0.1%	-1.9%
	Total GDP	3.6%	-1.4%	2.4%
Real growth rate	Exports	4.1%	4.4%	5.0%
	Imports	6.7%	-1.5%	6.0%

Contributions of components of domestic demand to GDP growth

Contributions of components of domestic demand to GDP growth

4. Balance-of-Payment-Constrained Growth Rate (BPCGR) and current account imbalances within the Eurozone.

Attention!!

- External imbalances might potentially suppose a constraint to economic growth and full employment.
- Possible limits of “one country Keynesianism”.

Attention!!

- External imbalances might potentially suppose a constraint to economic growth and full employment.
- Possible limits of “one country Keynesianism”.
- Theoretical framework: "Balance-of-Payments-Constrained Growth Rate" (BPCGR).

$$\hat{Y}_d^b = \frac{(1 + \eta + \psi)(\hat{p}_d - \hat{p}_f) + \varepsilon \hat{Y}_f}{\pi}, \quad \eta, \psi < 0, \quad \varepsilon, \pi > 0$$

Attention!!

- External imbalances might potentially suppose a constraint to economic growth and full employment.
- Possible limits of “one country Keynesianism”.
- Theoretical framework: "Balance-of-Payments-Constrained Growth Rate" (BPCGR).

$$\hat{Y}_d^b = \frac{(1 + \eta + \psi)(\hat{p}_d - \hat{p}_f) + \varepsilon \hat{Y}_f}{\pi}, \quad \eta, \psi < 0, \quad \varepsilon, \pi > 0$$

- Actual growth in each country should be near its BPCRG. However, some differences (and some CA imbalances) might be inevitable (elimination of high unemployment; catching-up).
 - ❖ Stabilisation of the net foreign debt-GDP ratio can be compatible with some trade deficit.
 - ❖ Two different cases if “a country grows too fast” (bad case/good case).
 - ❖ A different reading: “BPCGR is too low” → structural competitiveness.

Attention!!

- External imbalances might potentially suppose a constraint to economic growth and full employment.
- Possible limits of “one country Keynesianism”.
- Theoretical framework: "Balance-of-Payments-Constrained Growth Rate" (BPCGR).

$$\hat{Y}_d^b = \frac{(1 + \eta + \psi)(\hat{p}_d - \hat{p}_f) + \varepsilon \hat{Y}_f}{\pi}, \quad \eta, \psi < 0, \quad \varepsilon, \pi > 0$$

 - ❖ Stabilisation of the net foreign debt-GDP ratio can be compatible with some trade deficit.
 - ❖ Two different cases if “a country grows too fast” (bad case/good case).
 - ❖ A different reading: “BPCGR is too low” → structural competitiveness.
- A new perspective on internal devaluation in Spain: has it solved the historic dependence on imports? Will higher growth be sustainable?
 - ❖ Productive structure; energy dependency.

Competitiveness. A prerequisite for wellbeing and convergence in Europe?

Jorge Uxó, University of Castilla – La Mancha
